1. Preparation

Masking tape: Tape off paintwork around each headlight.

2. Remove Corrosion

- *You will need: Bottle of Yellow X and spray bottle of water or hose.*

Spray Yellow X onto the headlight lenses, making sure it covers right to the edges. Wait 10 seconds and rinse lenses and surrounding surfaces with water.

Headlight RESTORATION KIT

3. Sanding

- *You will need: Sandpaper and spray bottle of water or hose.*

Sandpaper to use

Five sheets of wet and dry sandpaper are included at grades starting with the most course at 400, then progressively getting finer with 600, 1000, 1500 and finest being 2000.

Examine the headlight lenses to determine the severity of damage.

Severe damage has pits, rough areas or blotchy discolourations.

This will require beginning with grade 400 to remove the course corrosion, then progress through all grades of sandpaper until the final 2000 grit.

Sanding

While sanding, continually apply water to the area being sanded. Continue sanding with water until all corrosion is removed. Dry the headlight lens and examine for any remaining corrosion.

Corrosion may still be evident when the headlight lens is dry. If so, apply more water and continue sanding until the headlight lens is smooth and free of corrosion.

Note: Final sanding should be with the fine 2000 grit sandpaper.

A complete kit designed to restore plastic headlight lenses to as new condition.

4. Polish

• *You will need: Bottle of Lens Polish and White Cloth.*

Squeeze a small amount of Lens Polish onto the white cloth.

Rub vigorously until lens shines.

Continue until all of the lens becomes clear. Absolute clarity is not needed.

Wipe off excess polish.

Examine the lens for any areas that are not clear. These area's will need more sanding followed by further polishing.

5. Clean

• *You will need: Bottle of Yellow X , Second White Cloth and White Scuff Pad*

Remove masking tape.

Spray Yellow X onto the headlight lenses, making sure it covers right to the edges.

Wait 10 seconds and clean the lens with new white cloth. Make sure no polish is remaining around edges.

Finally spray on Yellow X and lightly rub lens with the white scuff pad and dry lens. Make sure all edges and surrounding areas are clean and dry.

Headlight RESTORATION KIT

6. Apply Lens Clear

- *You will need: Bottle of Lens Sealer, Blue Cloth and Glove*

Take blue cloth and fold into a flat square.

Wear the protective glove to prevent the sealant making contact with your skin.

One half of the sealant amount will coat two average size lenses.

Saturate one edge of the folded towel and wipe across entire top of the lens. Continue wiping from one side to the other, working your way to the bottom of the lens.

Keep the edge of the towel saturated as you coat the lens.

The lens should be coated with a generous amount of sealant. Coat lens quickly and avoid excessive wiping. Lines from wiping will self level. Allow 1 Hour drying time.

Lens Sealer may be cleaned off surrounding surfaces with rubbing alcohol.

Warning

Keep away from children. Possible skin, eye, nose and throat irritant. Skin: Wash affected skin with soap and water. Nose and throat: If your having problem breathing move into an area of fresh air. Eyes: If in eyes flush with plenty of water. If irritation persists seek medical attention.
